The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Harder et al. (U.S. Patent No. 4,341,636). The reference discloses a system comprising a multimedia filtering means 107 (see col. 4, lines 36 and 44-46), a water softener 118 (see col. 5, lines 57 and 59-60), a carbon adsorption filter 122 (see col. 5, line 58), a mechanical vapor compression distillation unit 132 (see col. 8, lines 47-48), pipe means 42 connected to the distillation unit and a location 121 subsequent to the carbon filter and prior to the distillation unit, which pipe means is inherently capable to transporting low-pressure steam and/or distilled water, and means 10 for withdrawing purified water from the system and storing it in tanks 127; and this is all that is required by claims 11-19. This reference further teaches a polishing water softener 124 (see col. 7, line 48) "connected" to the distillation unit (i.e. via lines 42 and 9); and this is all that is further required by claim 20. Applicant should note that the intended use of a device (i.e. for manufacturing pharmaceutical water) is not a structural limitation, and hence cannot be relied upon to patentably distinguish apparatus claims. It is well settled that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. *Ex parte Masham*, 2 USPQ2d 1647 (1987).

Claims 1-10 are allowed because the references of record do not teach or fairly suggest manufacturing pharmaceutical water by removing hardness from chlorinated water in a water

softener, subjecting the softened water to dechlorination, distilling the dechlorinated water in a mechanical vapor compression distillation still where purified distilled water is produced and low-pressure steam is generated, passing a portion of the low-pressure steam to the recited location(s) to sanitize mechanical equipment components at the location(s), and withdrawing distilled water from the still and storing it as manufactured pharmaceutical water.

Gsell (U.S. Patent No. 6,679,988) discloses a conventional process for manufacturing pharmaceutical water.
